

Science, Math, and Computer Science Tutoring

Thoughtful support for clearer understanding, stronger study habits, and more confident problem solving.

Chemistry Physics Biology Math Computer Science MCAT / OAT / DAT

About Me

My name is Bobak Pezeshki. I have spent more than 20 years helping students learn science, math, test preparation, and computer science.

- **UC Irvine lecturer:** I teach CS 171 and CS 271, both Introduction to Artificial Intelligence courses, as well as ICS 46, Data Structure Implementation and Analysis. These courses cover AI topics such as search, probabilistic reasoning, and learning, along with the implementation and analysis of fundamental data structures and algorithms.
- **Academic background:** I earned my B.A. at UC Berkeley, double majoring in Molecular & Cell Biology with a Biochemistry emphasis and Integrative Biology. I earned my PhD in Computer Science at UC Irvine, focusing on AI, probabilistic inference, and automated reasoning.
- **Tutoring background:** I have tutored and led study groups at UC Berkeley's Student Learning Center, supported college graduates preparing for the MCAT, OAT, and DAT, and worked with middle and high school students across many levels, including students with unique learning needs.
- **Teaching background:** I have taught UC Berkeley's Chemistry-P, AP Chemistry, Honors Chemistry, Honors Physics, and introductory courses in chemistry, physics, and math.
- **Science and medical context:** I have worked as a biochemistry research assistant at UCSF and Novartis Vaccines and Diagnostics. I am EMT trained, have a pre-medical background, scored in the 97th percentile on the MCAT, and scored in the 98th percentile on the GRE for doctoral program admission.

How I Work With Students

- I start from each student's current understanding and build it step by step toward course expectations.
- I teach problem solving as one process: understanding the question, choosing a method that suits it, checking the result, and explaining why that method works.
- Sessions are calm and collaborative, with questions encouraged and mistakes treated as opportunities to learn.
- When helpful, I connect class material to future paths in engineering, health, computing, and the sciences.

Session Options

- **Standard Tutoring:** Custom-paced individual or small-group support (typically 2-4 students) for current coursework, test preparation, problem solving, filling background gaps, or learning the subject more deeply. Small groups work best when students share a course or exam goal, are at a similar level, and can meet consistently.
- **Custom course instruction:** I design and teach a full topic or course sequence, including lessons, guided practice, homework, and review.

Rates

Standard Tutoring

University level	\$125/hr	(one-on-one or small group)
Middle/High School	\$100/hr	(one-on-one or small group)

Custom Course Instruction

All levels	TBD, depending on topic, scope, and preparation needed.
------------	---

Standard tutoring at either level may be one-on-one or a custom small group. Virtual and in-person sessions are available; travel time may be included for farther in-person sessions.
